

INFORMATION MEETING

ABOUT THE PROPOSED HONEYWOOD WIND FARM

Eolectric / Geilectric have proposed a 5 turbine wind farm north and east of Honeywood, approximately 1 km west of the Niagara Escarpment boundary. Just before Christmas, they filed an Environmental Screening review with the Province, giving until Jan. 30 (now extended to Feb. 20) for reply. Unless objections (referred to as "Requests for Elevation") are received by the Ministry of Environment before Feb. 20, the Provincial environmental approval can come into effect.

Information was filed with the Province that had never before been released to the public or the Township, and which was not made available to the public online.

CORE has received that detailed information, however, and wants to ensure that you, a neighbour and/or CORE supporter, can be made aware of it, ask questions about it, understand what CORE has done to date - and get information on what **YOU** can do to make your position known to the Province and the Township.

We are also aware the Eolectric has appealed the Township's OPA 12, (Official Plan Amendment 12), intended to provide clearer standards for turbine applications, and very recently filed for a rezoning bylaw.

Eolectric is counting on residents not being educated or engaged in this process - their own reports show noise impact beyond Provincial standards on some of our neighbours, including those who signed Options to Lease **BEFORE** any analysis was done. **Your attendance is crucial.**

COME - get the facts and ask questions

WHEN? Saturday Feb. 7th,
10 am start, ending at noon.

WHERE? The North Dufferin Community
Centre, (Honeywood Arena)
